26 April 1965

MEMORANDUM FOR THE RECORD

SUBJECT: Final Report on PAR 222, [ ] Stereo Image  
Registration System.

25X

1. The final report on PAR 222, Stereo Image Registration Study, dated 30 January 1965 has been received. Although [ ] was able to achieve excellent correlation between image displacement in registration on selected image pairs, the registration to error correlation is very poor or non-existent on most random image pairs.

25X

2. The report indicates that [ ] would need to spend a great deal more time to develop a more effective system for determining registration error from scanned signals.

25X

3. I recommend that the report be accepted and that PAR 222 be cancelled. The report will be turned over to the Interpretation Systems Section for further study since that Section is carrying on at least one other study in automatic stereo correlation.
